

Launch Linux EC2 instance

To Begin with the Lab

Summary of the Lab

This lab demonstrates how to launch an Amazon Linux EC2 instance, configure security settings, connect using SSH, install and start the Apache web server, create a simple web page, access it through the public IP, and finally terminate the instance to avoid unnecessary charges.

Lab step

Step 1: Create EC2 Instance

- Go to EC2 in AWS Account

- Choose Mumbai server
- Launch instances

- Enter a name **MyLinuxInstance**

Launch an instance Info

Amazon EC2 allows you to create virtual machines, or instances, that run on the AWS Cloud. Quickly get started by following the simple steps below.

Name and tags Info

Name

MyLinuxInstance

[Add additional tags](#)

- Select **Amazon Linux** as the AMI

▼ Application and OS Images (Amazon Machine Image) [Info](#)

An AMI contains the operating system, application server, and applications for your instance. If you don't see a suitable AMI below, use the search field or choose [Browse more AMIs](#).

 Search our full catalog including 1000s of application and OS images

[Additional costs apply for AMIs with pre-installed software](#)

- Create or select an existing key pair.

▼ Key pair (login) [Info](#)

You can use a key pair to securely connect to your instance. Ensure that you have access to the selected key pair before you launch the instance.

Key pair name - *required*

Mumbai

 Create new key pair

Step 2: Configure Security Group

- Allow **SSH (Port 22)** for remote access.
- Allow **HTTP (Port 80)** for web traffic.
- Review the configuration.

Additional charges apply when outside of free tier allowance

Firewall (security groups)

Info

A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.

Create security group

Select existing security group

We'll create a new security group called 'launch-wizard-1172' with the following rules:

☒ Allow SSH traffic from

Helps you connect to your instance

My IP

223.184.172.8/32

☐ Allow HTTPS traffic from the internet

To set up an endpoint, for example when creating a web server

☒ Allow HTTP traffic from the internet

To set up an endpoint, for example when creating a web server

Click refresh to view backup information

The tags that you assign determine whether the instance will be backed up by any Data Lifecycle Manager policies.
